

Kareem Hussein

IoT & Cybersecurity Student | Embedded Systems | Penetration Testing Enthusiast

Irbid, Jordan | [linkedin.com/in/kareem-belal-hussien](https://www.linkedin.com/in/kareem-belal-hussien) | Jordan University of Science & Technology

PROFESSIONAL SUMMARY

Motivated IoT & Cybersecurity student at Jordan University of Science and Technology (JUST), with hands-on experience in embedded systems development, ethical hacking, and digital banking services. Skilled in designing secure IoT applications using Arduino and ESP32, and proficient in penetration testing methodologies. Combines technical depth with strong communication and customer service skills developed through professional banking experience. Passionate about building smart, secure systems that solve real-world problems.

WORK EXPERIENCE

Digital Banking Assistant

2026 – Present

Bank al Etihad • Amman, Jordan

- Assisted customers with mobile banking application services and digital banking features.
- Guided customers in navigating ATMs and self-service banking channels efficiently.
- Directed customers to appropriate departments and service counters, improving branch flow.
- Delivered high-quality customer support, contributing to enhanced overall customer experience.
- Helped manage customer queues and reduce waiting times within the branch.

Pisciner (Trainee)

2025

42 Irbid • Irbid, Jordan

- Completed the intensive Piscine selection process at 42 Irbid — a peer-learning coding bootcamp focused on problem-solving, algorithms, and collaboration under pressure.

EDUCATION

Bachelor of Science – Computer Engineering (IoT & Cybersecurity Track)

In Progress

Jordan University of Science and Technology (JUST) • Irbid, Jordan

PROJECTS

Secure Embedded Access Control System

Arduino-based hardware & software project

- Designed and implemented a secure physical access control system using Arduino.
- Integrated authentication mechanisms to restrict unauthorized access to protected areas.
- Applied embedded security principles to ensure tamper resistance and reliability.

Fire & Gas Detection Safety System

Arduino-based IoT Safety Project

- Built a real-time fire and gas detection system using sensors and Arduino microcontroller.
- Programmed automated alerts and safety responses triggered by hazardous readings.
- Focused on reliability and low-latency response critical for safety-critical environments.

Room Comfort Station

IoT Coursework Project – JUST

- Designed, implemented, and presented an IoT-based room environment monitoring station.
- Monitored temperature, humidity, and comfort parameters using ESP32 and multiple sensors.
- Demonstrated full project lifecycle: ideation, hardware integration, coding, and presentation.

Custom Minecraft Game Controller

TECHBOTS Workshop

- Collaborated in a team to design and build a custom physical game controller for Minecraft.

- Applied skills in Arduino programming, 3D design, and hardware prototyping.
- Combined creativity with technical engineering in a competitive workshop environment.

LICENSES & CERTIFICATIONS

PEH – Practical Ethical Hacking

Issued Jan 2026

Cybers Mind

- Comprehensive hands-on training covering penetration testing methodologies, network security, and real-world ethical hacking techniques.

CS50's Introduction to Cybersecurity

Harvard University (edX/CS50)

- Completed CS50's Introduction to Cybersecurity, covering fundamentals of securing systems and networks, cryptography, and best practices for protecting data and infrastructure.

Introduction to IoT Using ESP32

Issued May 2026

IEEE Robotics & Automation Society, JUST Student Chapter

- Intensive 16-hour program focused on building IoT applications using the ESP32 microcontroller.

Unity Game Development Training

Issued Feb 2025

Jordan Gaming Lab

- 30-hour program covering game development with Unity, C#, interactive game environments, and core development concepts.

Arduino & Embedded Systems Workshop

2024

TECHBOTS

- Hands-on workshop covering Arduino programming, 3D design, and hardware prototyping culminating in a real project build.

SKILLS & TECHNOLOGIES

Cybersecurity: Ethical Hacking, Penetration Testing, Network Security, Cybersecurity Fundamentals

IoT & Embedded: Arduino, ESP32, Tinkercad, Embedded Systems, Sensor Integration, Access Control Systems

Programming: Python, C++, C#, HTML, Object-Oriented Programming (OOP), Algorithms

Game Development: Unity, Game Design, Unity Game Development

Tools & IDEs: Visual Studio, PyCharm, Microsoft Office Suite (Word, Excel, PowerPoint)

Soft Skills: Leadership, Teamwork, Problem Solving, Customer Service, Communication

Languages: Arabic (Native), English (Professional)
